

MVP

1 FURROW MOUNTED PLOUGH FOR ON LAND / IN FURROW OPERATIONS WITH
HYDRAULIC FURROW WIDTH ADJUSTMENT

*Made in Italy
since 1957*

MORO
ARATRI 

MVP

It is the innovative line of 1 furrow mounted ploughs, equipped with hydraulic working width adjustment. Advanced CAD software is used for design and structural analysis of these machines, with simulated performance and fatigue testing. The chassis of the MVP plough, like all the other structural parts, is made of special steel, with a very high yield load.

EXTREME VERSION

The MVP extreme version is designed for deep ploughing. Created for reaching the important working depth of 110 cm, and for enduring the most extreme conditions, it can be used both for on land and in furrow operations

HYDRAULIC WIDTH ADJUSTMENT

Equipped with a unique hydraulic width adjustment, the MVP ploughs allow the operator to determine and set the working width, according to different soil and climatic conditions.

By means of a double acting hydraulic cylinder, it is possible to adjust the working width continuously while working, remaining comfortably seated in the driver's seat.

Using the same hydraulic system which adjusts the furrow width, the plough can be regulated for in furrow or on land operations.

Moreover, a second hydraulic jack allows to adjust the pulling point.

MOULDBOARDS

From the model 22A

STEEL

Boron steel mouldboard extremely wear resistant, for a precise and low power absorption ploughing.

Various models for a working depth ranging from 50 cm to 110 cm.

(For further information please contact the sales network)

SYNTHETIC

Plastic mouldboard for wet and sticky soils without stones.

It allows the soils to flow with less effort.

Various models for a working depth ranging from 50 cm to 110 cm.

(For further information please contact the sales network)

REAR BODY

During the in furrow operations, the rear body partially anticipates the working of the main body, turning over a portion of soil in the furrow. The depth is reduced, easing the inclination of the tractor.

EQUIPMENTS

From the model 22A

SHARE

High quality boron steel share, heat treated and wear resistant. MORO shares provide an excellent penetration in any soil and the point can be adjusted.

FULL KNIFE COULTER

For an excellent vertical cut of the furrow and an enhanced resistance to roots while deep ploughing.

DETACHABLE COUPLING YOKES HEADSTOCK

Solid headstock. The possibility of changing the coupling yokes with custom versions, allows a functional match with all tractors.

STANDARD VERSION

The MVP standard version is designed for ploughing until the working depth of 60 cm. Equipped with the hydraulic working width adjustment and with the parallelogram geometry, the MVP has 2 possible configurations .

- In furrow / finishing
- On land / In furrow

CONFIGURATION 1

IN FURROW

FINISHING

CONFIGURATION 2

ON LAND

IN FURROW

MOULDBOARDS

Until the model 20A

STEEL

Boron steel mouldboard extremely wear resistant, for a precise and low power absorption ploughing.

Various models for a working depth ranging from 20 cm to 55 cm. Also available in multi layer steel plate.

(For further information please contact the sales network)

SLATTED

Boron steel slatted mouldboard for sticky soils. Excellent crumbling. Various models for a working depth ranging from 20 cm to 55 cm.

Synthetic version available.

(For further information please contact the sales network)

SYNTHETIC

Plastic mouldboard for wet and sticky soils without stones. It allows the soils to flow with less effort.

Various models for a working depth ranging from 20 cm to 55 cm.

(For further information please contact the sales network)

SKIMMERS

Rice field - Synthetic - Steel

EQUIPMENTS

Until model 20A

SHARES

High quality boron steel shares, heat treated and wear resistant. MORO shares provide an excellent penetration in any soil.

Available with reversible and interchangeable point.

KNIFE COULTER

Available on all the plough bodies

STANDARD HEADSTOCK

Each MORO plough is equipped with a hydraulic headstock with a double acting reversing cylinder. Vertical tilt can be adjusted independently via 2 turnbuckles. On request, for the reversing unit it is possible to mount a memory cylinder.

DETACHABLE COUPLING YOKES HEADSTOCK

Solid headstock. The possibility of changing the coupling yokes with custom versions, allows a functional match with all tractors.
